

INFORMATION SECURITY AWARENESS TRAINING

**Non-technical,
jargon free,
practical**

**Email security,
passwords,
mobile devices**

**Coffee Shops,
WiFi Surfing
safely**

**Social
engineering,
oversharing**

WHY IS AWARENESS TRAINING SO IMPORTANT?

Humans remain the weakest link in the chain. Some of the most complicated cyber attacks were successful because of an employee being tricked into opening an email .

The list of cyber attacks would fill multiple pages but some of the more well known cyber attacks include Sony Pictures Entertainment, Target, the US Office of Personnel and UK's TalkTalk. In all of these companies the human element was pivotal in the success of the cyber attack.

An effective solution to changing the culture of your organisation is through information security awareness training. The focus on the information security awareness training should be towards achieving a long term shift in the attitude of employees towards security, whilst promoting a cultural and behavioural change within an organisation.

ABOUT THE COURSE

The Information Security Awareness Training is designed to provide an in depth review of cyber security topics specific to the end user. Each section provides tools and information about what to do and what not to do to keep your hardware and data safe and secure.

Participants will learn

- Email security & passwords
- Social engineering & oversharing
- Mobiles & smart devices
- Safe & secure file sharing
- Cyber safety for kids
- Surfing safely & other tips
- Coffee shop & WiFi
- Safe surfing

INFORMATION SECURITY AWARENESS

We can support your organisation and objectives in other ways, including:

- Conducting a comprehensive review of your cyber security awareness training programs and their effectiveness.
- Conducting an analysis of your existing information security awareness training and updating the content to include latest threats.
- Design a bespoke effective information security awareness training program based on your processes and recommend best practices. Tailored and branded specifically for your organisation.
- Help your organisation build a culture of information security awareness.

Furthermore, we can help you define your objectives so that you can produce a measurable information security awareness program. There are four key areas that should be defined...

- Setting disciplinary baselines meant to establish justification for disciplinary actions when an employee breaks policy;
- Regulatory compliance;
- Establishing, diminishing or maintaining certain behaviours
- Development of knowledge among employees in regards to security and risk management.

“I was coming from a very low knowledge base and am not a “techie” so it was perfectly pitched to increase my awareness” ”

Susan Cordingley, Director of Planning & Communications, National Council for Voluntary Organisations (NCVO)
