CYBER MANAGEMENT ALLIANCE

AN INTRODUCTION TO GDPR

How much do you know about Europe's biggest overhaul of data protection law for a generation?

You would have to have been hiding under a rock for the past two years not to have heard about the GDPR (General Data Protection Regulation) or at the very least, the value of its penalties. But, what do you know about how it applies to you and your organisation?

The GDPR is set to bring in sweeping changes in the way European businesses, and those that interact with European residents collect, process and store personal data.

In this one-day course, we seek to educate anyone with a basic understanding of personal data processing systems about the incoming regulation. Free of legal jargon, you will complete the course knowing what the GDPR means to you, where to start with your preparations and crucially, how to respond to a breach.

INTERACTIVE SESSIONS

PRAGMATIC & PRACTICAL ADVICE

Delegates will learn and understand:

- The history of the GDPRs inception and creation.
- Who the GDPR applies to, both inside and outside the borders of the EU.
- Who is accountable and what steps they need to take to prepare.
- What is personal data and what is classified as special categories of personal data.
- What defines a data controller and a processor.
- What is a breach and how to respond.
- Who is the data protection officer and which types of organisations must appoint one.
- The price of non-conformance.
- How to work with European data and international partners.

Course Modules Include:

- Applicability
- Accountability
- Scope and Territory
- Personal Data and Special Categories
- The Data Controller and Processor Roles
- The Six Core Principles
- What is a Breach
- Underage Data Subjects
- Data Subjects Rights
- The Data Protection Officer
- Data Privacy Impact Assessments
- Incident Response
- Administrative Penalties
- International Data Transfers

WHO IS THIS COURSE FOR

Ideal for any professional looking to increase their knowledge and better understand GDPR

AN INTRODUCTION TO GDPR

Hosted by Chris Payne
Managing Director, Advanced Cyber Solutions

Chris Payne started his career working in telecoms and network infrastructure, moving into the security industry out of an interest in the topic. Working in the IT security channel market as a technical consultant for many years, Chris has worked with some of the largest security vendors, distributors, resellers and customers. He has written and contributed to numerous whitepapers, blogs and publications; hosted and presented at events in both the UK, Denmark and Norway and been filmed for the Business Reporters online edition. In recent years, Chris has specialised in information security becoming certified as a GDPR practitioner under the IT Governance IBITGQ programme and founding IT security solutions and consultancy provider Advanced Cyber Solutions Ltd.

GDPR is at the dinner table and is hungry for its first victims
by Chris Payne

Since 1998, the UK's Data Protection Act has been looking after your personal data, your digital identity but as of May 2018, it will be consigned to the scrap heap due to the introduction of the GDPR – General Data Protection Regulation – from Europe; and trust us, this new legislation is far more comprehensive than our old Act and is something not to be dismissed lightly.

The GDPR started its journey way back in January 2012 with the European Commission. Over two years, the regulation was handed around between the Council, the European Commission and the European Parliament, finally emerging as a directive in 2016.

The GDPR, all 260-plus pages, is finally implemented in May 2018 and whilst it's not on everyone's reading list, its key fundamentals should be part of everyone's knowledge. Yes, it is a set of terms and conditions when it comes to handling personal data, and that's the key reason why the majority of us in the business world need to know and understand the basic requirements of the GDPR.

Cyber Management Alliance – The Leaders in Cyber Security Training & Consultancy

Founded by Amar Singh, Cyber Management Alliance is closing the divide in cyberspace by bringing together the best qualities of thought leadership and operational mastery of cyber security management.

The Cyber Management Alliance was founded with the primary objective of providing elite, specialised cyber security training to business executives and senior management. The purpose of the Cyber Management Alliance is to achieve joint strategic goals of reducing organizational risk exposure to cyber threats and leverage the global cyber resource pool.

AS ALBERT EINSTEIN SAID: "Any fool can know; the point is to understand."
